No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (27 Congress Street, Salem, Massachusetts 01970), for copying beyond that permitted by Sections 107 or 108 of the U. S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1986 articles are as shown on the article title pages; if no fee code appears on the title page, the copy fee is the same as for current articles.

CONTENTS OF VOLUME 157

NUMBER 1, AUGUST 15, 1986

Tissue Porphyrin Pattern Determination by High-Speed High-Performance Liquid Chromatography *Sean W. Kennedy, Donald C. Wigfield, and Glen A. Fox* 1

Hydrophobicity Modulation as a Tool for the Purification of Histidyl Peptides *M. J. Biscoglio de Jimenez Bonino, J. G. Fukushima, and O. Cascone* 8

Analysis of Whole Blood Manganese by Flameless Atomic Absorption Spectrophotometry and Its Use as an Indicator of Manganese Status in Animals *Michael S. Clegg, Bo Lönnerdal, Lucille S. Hurley, and Carl L. Keen* 12

Comparison of Glycoproteins by Two-Dimensional Mapping of Glycosylated Peptides *Olivia Salinovich and Ronald C. Montelaro* 19

Determination of Proteins and Sulfobetaine with the Folin–Phenol Reagent *Michel Ledoux and François Lamy* 28

A Thin-Gel Isoelectric Focusing Method for Quantitation of Protein *S*-Thiolation *James A. Thomas and Daniel Beidler* 32

Comparison of Electron and Chemical Ionization Mass Spectrometry of Sialic Acids *Gerd Reuter and Roland Schauer* 39

Preparation of Rat Liver Plasma Membrane with Respect to Glucagon-Sensitive Adenylate Cyclase *Juan A. Ruiz and Ren-jye Ho* 47

Purification and Postsynthetic Modifications of Friend Erythroleukemic Cell High Mobility Group Protein HMG-I *Terry S. Elton and Raymond Reeves* 53

Isolation of the Zona Pellucida and Purification of Its Glycoprotein Families from Pig Oocytes *J. L. Hedrick and N. J. Wardrip* 63

A Procedure for the Immunoblotting of Proteins Separated on Isoelectric Focusing Gels *Carol A. Otey, Michael H. Kalnoski, and J. Chloe Bulinski* 71

Rapid Sulfopropyl-Disk Chromatographic Purification of Bovine and Human Thrombin *Frank C. Church and Herbert C. Whinna* 77

Synthesis and NMR Spectra of ^{13}C-Labeled Coenzyme A Esters *J. E. Robbins, M. S. Ball, and S. A. Williams* 84

A Double Staining Method for Differentiating between Two Classes of Mycobacterial Catalase in Polyacrylamide Electrophoresis Gels *Lawrence G. Wayne and Gilbert A. Diaz* 89

Analysis by High-Performance Liquid Chromatography of Hyaluronic Acid and Chondroitin Sulfates *Michael E. Zebrower, Fred J. Kieras, and W. Ted Brown* 93

Optimization of Erythrocyte Membrane Glycoprotein Fluorescent Labeling with Dansylhydrazine after Polyacrylamide Gel Electrophoresis *Timothy N. Estep and Theresa J. Miller* 100

Simultaneous Determination of Tocopherols, Ubiquinols, and Ubiquinones in Blood, Plasma, Tissue Homogenates, and Subcellular Fractions *Johanna K. Lang, Kishorchandra Gohil, and Lester Packer* 106

Detection of Metallothionein on Nitrocellulose Membrane Using Western Blotting Technique and Its Application to Identification of Cadmium-Binding Proteins *Yasunobu Aoki, Manabu Kunimoto, Yasuyuki Shibata, and Kazuo T. Suzuki* 117

Rapid and Effective Transfer of Integral Membrane Proteins from Isoelectric Focusing Gels to Nitrocellulose Membranes *Stephan Matthaei, Deborah L. Baly, and Richard Horuk* 123

High-Performance Liquid Chromatographic Separation of Platinum Complexes Containing the *cis*-1,2-Diaminocyclohexane Carrier Ligand
Stanley K. Mauldin, Fred A. Richard, Marcus Plescia, Steven D. Wyrick, Aziz Sancar, and Stephen G. Chaney 129
Effects of the Modification of Transfer Buffer Composition and the Renaturation of Proteins in Gels on the Recognition of Proteins on Western Blots by Monoclonal Antibodies *Stanley D. Dunn* 144
Effect of Photoaffinity Labeling on Rabbit Uterine Progesterone Receptor
Christine L. Clarke, Peter D. Feil, and Pondichery G. Satyaswaroop 154
A Solid-Phase Substrate of Heparanase: Its Application to Assay of Human Melanoma for Heparan Sulfate Degradative Activity
Motowo Nakajima, Tatsuro Irimura, and Garth L. Nicolson 162
Separation of Dimethylphosphatidates of Alkylacyl Glycerophosphocholine and Their Molecular Species by High-Performance Liquid Chromatography
Yasuhito Nakagawa, Kazuyuki Fujishima, and Keizo Waku 172
Quantitation of Picomole Levels of *N*-Acetyl- and *N*-Glycolylneuraminic Acids by a HPLC-Adaptation of the Thiobarbituric Acid Assay
Leland D. Powell and Gerald W. Hart 179
A High-Performance Liquid Chromatographic Method for the Assay of Cholesterol 7α-Hydroxylase Activity *Hiromitsu Yokohama, Issei Ohtsuka, Hiroyuki Shiojiri, Kouich Katayama, and Seiji Ishikawa* 186
A Continuous-Flow High-Yield Process for Preparation of Lipid-Free Hemoglobin
John R. DeLoach, Cynthia L. Sheffield, and George E. Spates 191

NUMBER 2, SEPTEMBER 1986

N^4-(6-Aminohexyl)cytidine and -deoxycytidine Nucleotides Can Be Used to Label DNA
I. C. Gillam and G. M. Tener 199
An Ultrasensitive Time-Resolved Immunofluorometric Assay of Human Epidermal Growth Factor
K. Pesonen, H. Alfthan, U.-H. Stenman, L. Viinikka, and J. Perheentupa 208
Simultaneous and Direct Determination of Pyridoxal, Pyridoxal-5'-Phosphate, and Pyridoxic Acid in Serum by Derivative Synchronous Fluorescence Spectroscopy
Ana Petidier, Soledad Rubio, Agustina Gómez-Hens, and Miguel Valcárcel 212
Resolution of Steroid Binding Heterogeneity by Fourier-Derived Affinity Spectrum Analysis (FASA) *Jeffrey I. Mechanick and Charles S. Peskin* 221
Quantitative *in Situ* Hybridization Using Initial Velocity Measurements
Evelyne Cash and Michel Brahic 236
Monitoring Exposure to Acrylamide by the Determination of *S*-(2-Carboxyethyl)cysteine in Hydrolyzed Hemoglobin by Gas Chromatography–Mass Spectrometry
E. Bailey, P. B. Farmer, I. Bird, J. H. Lamb, and J. A. Peal 241
Protein Migration through Hydrogels: A Tool for Measuring Porosity—Application to Hydrogels Used as Contact Lenses *A. M. Gachon, T. Bilbault, and B. Dastugue* 249
Isolation of Phosvitin: Retention of Small Molecular Weight Species and Staining Characteristics on Electrophoretic Gels *Robin A. Wallace and Jay P. Morgan* 256
Purification of Human Serum Vitamin D-Binding Protein by 25-Hydroxyvitamin D_3–Sepharose Chromatography *Rebecca P. Link, Kato L. Perlman, Eric A. Pierce, Heinrich K. Schnoes, and Hector F. DeLuca* 262

The Effect of Staining on the Immunoreactivity of Nitrocellulose Bound Proteins
David R. Harper, Kit-Ming Liu, and Hillar O. Kangro 270
Resolution of a Common RNA Sequencing Ambiguity by Terminal Deoxynucleotidyl Transferase
Dan C. DeBorde, Clayton W. Naeve, M. Louise Herlocher, and Hunein F. Maassab 275
Reversible and Specific Interaction of Dehydrogenases with a Coenzyme-Coated Surface Continuously Monitored with a Reflectometer
Carl Fredrik Mandenius, Klaus Mosbach, Stefan Welin, and Ingemar Lundström 283
High Concentration Polyacrylamide Gel Electrophoresis
Vandana S. Dhamankar, Manjusri Dutta Choudhury, and H. G. Vartak 289
Effect of Zwitterionic Buffers on Measurement of Small Masses of Protein with Bicinchoninic Acid *Varsha Kaushal and Larry D. Barnes* 291
Separation of Tryptophan from DSIP, A Trp-Nonapeptide, by Adsorption to Aluminum Oxide *Markus V. Graf, Bruno Saegesser, and Guido A. Schoenenberger* 295
Gas Chromatography–Mass Spectrometry of Isobutyl Ester Trimethylsilyl Ether Derivatives of Bile Acids and Application to the Study of Bile Sterol and Bile Acid Biosynthesis in Rat Liver Epithelial Cell Lines
Christos Tsaconas, Prudent Padieu, Gabrielle Maume, Martine Chessebeuf, Nadia Hussein, and Nicole Pitoizet 300
Purification of Bovine Neurosecretory Granule Membranes by Density Gradient Centrifugation
Carlos B. González, Carlos E. Caorsi, William G. North, and Olga T. Berrios 316
Preparation and Characterization of Unilamellar Vesicles from Cholate–Phospholipid Micelle Treated with Cholestyramine
Joseph B. Ventimiglia, Marc C. Levesque, and T. Y. Chang 323
Cell Blotting: Techniques for Staining and Microscopical Examination of Cells Blotted on Nitrocellulose Paper *Beerelli Seshi* 331
A Digestion Bomb for Wet Ashing Biological Materials
Robert McKnight and Paul Saltman 343
Extended Sensitivity for the Calcium Selective Electrode *Richard W. Morton, Jun Ki Chung, James L. Miller, J. Paul Charlton, and Roger S. Fager* 345
Spectrophotometric Detection of Monovalent Cation Flux in Cells: Fluorescence Microscope Measurement of Acetylcholine Receptor-Mediated Ion Flux in PC-12 Cells
Jeffrey W. Karpen, Alan B. Sachs, Elena B. Pasquale, and George P. Hess 353
Determination of 2-Keto-L-Gulonic and Other Ketoaldonic and Aldonic Acids Produced by Ketogenic Bacterial Fermentation *Robert A. Lazarus and Jana L. Seymour* 360
Determination of Lysozyme Activity at Low Levels with Emphasis on the Milk Enzyme
H. A. McKenzie and F. H. White, Jr. 367
A Direct Colorimetric Assay for Ca^{2+}-Stimulated ATPase Activity
Kwok-Ming Chan, Dennis Delfert, and Kurt D. Junger 375
Determination of ADP-Ribosyl Arginine Anomers by Reverse-Phase High-Performance Liquid Chromatography
Mikako Tsuchiya, Yoshinori Tanigawa, Koichi Mishima, and Makoto Shimoyama 381
ATP Sulfurylase-Dependent Assays for Inorganic Pyrophosphate: Applications to Determining the Equilibrium Constant and Reverse Direction Kinetics of the Pyrophosphatase Reaction, Magnesium Binding to Orthophosphate, and Unknown Concentrations of Pyrophosphate
Lori A. Daley, Franco Renosto, and Irwin H. Segel 385

Carbohydrate Mapping by Mass Spectrometry: A Novel Method for Identifying Attachment Sites of Asn-Linked Sugars in Glycoproteins
Steven A. Carr and Gerald D. Roberts 396

ERRATUM

Volume 154, Number 2, May 1986: Nigel Fleming and Ralph A. Nixon, "A Versatile Transition Metal Salt Reaction for a Wide Range of Common Biochemical Reagents: An Instantaneous and Quantifiable Color Test," pp. 691–701 407

AUTHOR INDEX FOR VOLUME 157 408

The Subject Index for Volume 157 will appear in the December 1986 issue as part of a cumulative index for the year 1986.

INFORMATION FOR AUTHORS

Analytical Biochemistry is an international journal that publishes original articles on methods and methodology of interest to the biological sciences and all fields that impinge on biochemical investigation. In addition to the expected techniques that apply to biochemical preparations and analysis, the following should be considered as within the scope of the journal:

— Cell biology and cell, tissue, and organ culture methods that are of general application.

— Membranes and membrane proteins. These methods form a major section of interest

— Procedures of interest in the field of molecular genetics including those necessary for cloning, sequencing, and synthesis of nucleic acids and for mutagenesis.

— Purification methods for enzymes and other proteins which contain a major novel aspect and in which a high level of purity is achieved. Acceptance for publication is based on the contribution made toward protein purification and not on the successful purification of a specific protein.

— Immunological techniques both analytical and preparative, if they are of general applicability by biochemists. Immunoassays are included but only if a unique approach is introduced rather than the determination of a substance not previously assayable.

— Pharmacological and toxicological research techniques that offer a biochemical approach.

— Review articles dealing with timely topics. Although these are generally invited, unsolicited outlines or manuscripts will be considered.

Manuscripts are accepted for review with the understanding that the same work has not been and will not be nor is presently submitted elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in *Analytical Biochemistry* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Address. Manuscripts should be submitted in quadruplicate to *Analytical Biochemistry*, Editorial Office, Seventh Floor, 1250 Sixth Avenue, San Diego, California 92101. In the case of rejected manuscripts, only one copy of the manuscript will be returned to the author.

An extended Information for Authors is published in each July issue. Reprints are available from the Editorial Office. Authors should consult this Information for details on nomenclature, IUPAC-IUB rules and recommendations, and accepted abbreviations.

Manuscripts should be concise and consistent in style, spelling, and use of abbreviations. In order to facilitate the processing of manuscripts, the journal requests that at least four copies be submitted, each copy to include all figures (originals or glossy prints) and tables. The original copy must be typewritten, double-spaced, on one side of white bond paper, about $8\frac{1}{2} \times 11$ inches in size, with one-inch margins on all sides. Each manuscript should have a separate title page noting title of article, authors' names (without degrees), a running title (not exceeding 55 letters and spaces), an abstract (250 words), and the address to which proof should be mailed. In creating a title for your paper, please omit words such as *novel*, *rapid*, *improved*, *simple*, *sensitive*, *efficient*, *convenient*, *new*. Each is felt to be redundant and actually slows down the reader who is scanning the article titles and wants to know more about the method itself. Please substitute informative words that will give readers a more complete idea of the usefulness of your paper with regard to the limitations of their equipment or sample type. For example, what *kind* of method are you describing? Abbreviations should not be used in the article title or running title.

Please number all pages of the manuscript.

Authors should indicate the following on the title page: (1) the appropriate subject category for listing in the Table of Contents; (2) six descriptive key words for computer-aided selection of reviewers. (Please see the Appendix at the end of the extended Instructions to Authors published in the July 1, 1986 issue for a list of recommended key words.) These words will also be used in the preparation of the annual cumulative subject index for the journal.

Text. The suggested organization of an article is: abstract; introductory statement; Materials and Methods; Results; Discussion; Acknowledgments; References. Some of these sections may be combined if the presentation is thereby made clearer or more effective. Although this is the general form, the journal will accept short papers of approximately two printed pages that are arranged without specific sections except for a short abstract.

Names of chemical or organic substances should follow the recommendations of the IUPAC–IUB Combined Commission on Biochemical Nomenclature (CBN) as published in the extended Instructions for Authors, appearing in the July issue of this journal.

Authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiments described. Any relevant safety precautions should be described; if an accepted code of practice has been followed, a reference to the relevant standards should be given.

Figures should be numbered consecutively with Arabic numerals in order of mention in the text: each figure should have a descriptive legend. Legends should be typed together on a separate sheet, double-spaced. All illustrations should be in finished form ready for the engraver. A convenient size for drawings is $8\frac{1}{2} \times 11$ in. (21×27.5 cm). Drawings should be made with India ink on tracing linen, smooth surface white paper, or Bristol board. Graph paper if used should be ruled in blue. Grid lines that are to show in the final engraving should be inked in black. Glossy prints properly prepared are acceptable.

Photographs must be kept to a minimum. All photographs should be submitted as single glossy prints with strong contrasts and not mounted on cardboard; the magnification should be indicated by a scale where possible.

Illustrations in color can be accepted only if the authors defray the cost.

Tables should be typed on separate pages, numbered consecutively with Arabic numerals in order of mention in the text. Each table should have a short explanatory title.

Footnotes should be designated in text by superscript numbers and typed on a separate sheet. Footnotes to tables should be identified with lowercase italic superscript letters and placed at the bottom of the table.

References to the literature should be cited in the text by Arabic numerals in parentheses and listed at the end of the paper in consecutive order. Abbreviations of journal titles should follow the style used in *Chemical Abstracts Service Source Index,* 1985. Please note style of capitalization and punctuation for journal articles and edited books in the following examples:

1. Martin, S. C., and Ekman, P. (1986) *Anal. Biochem.* **154,** 395–399.
2. Bovey, F. A., and Jelinski, L. W. (1983) Chain Structure and Conformation of Macromolecules, p. 150, Academic Press, New York.
3. Zoller, M. J., and Smith, M. (1983) *in* Methods in Enzymology (Wu, R., Grossman, L., and Moldave, K., eds.), Vol. 100, Part B, pp. 468–500, Academic Press, New York.

Proofs. Proofs will be sent to the authors with reprint order forms. Fifty reprints of each article are provided free of charge. Additional reprints may be ordered using the form provided.
